

The Louisiana Chemical Manufacturing Initiative

A Seminar Featuring Louisiana's World-Class Chemical Corridor

Tuesday, 26 April, 2016, 1:00pm – 2:00pm

Hannover Messe, USA Pavilion, Hannover, Germany

As one of 24 federally-designated “Investing in Manufacturing Communities Partnership” (IMCP) regions, the Louisiana Chemical Corridor is the only IMCP focusing on the chemical and chemical derivatives industry. This initiative encompasses 88 public and private organizations that have partnered with the objective of making the entire region more globally competitive by focusing on the region’s workforce, infrastructure, trade, innovation, and supply chain. Seminar speakers will highlight the Corridor’s inherent strengths and future objectives and discuss the significant energy investments – including the lower 48 states’ first LNG export terminal – along the Gulf Coast.
